

Small Bone Compressor/Distractor

Designed by Richard Wittcock, DPM and Robert Baglio, DPM

Designed to distract small joints in a linear direction in foot, hand, and spine surgery

Multiple hinge design allows better joint visualization and access. Distal hinge can be loosened once the distraction nut is tightened, allowing the surgeon to move the handle out of the surgical field.

Shouldered Pin Retractors

Designed by M. Jake Hamer, MD

Useful in fracture and reconstructive cases

Can be used for opening wedge osteotomies, obtaining length or distraction to correct a foreshortened malunion, or in trauma cases (calcaneus fractures, tibial plateau fractures, pilon fractures). With three different length shouldered pins, the retractor can be set at different depths to provide the necessary retraction and/or distraction.

Can be used with the 1826 and 1826-01 Compressor/Distractors, and any other compressor and/or distractor that can accept 1/8" (3.2mm) pins.
